

# SEALING DETAILS FOR GROUND GASES

**Notes:**

Delta Systems provide the world's foremost range of products for Drainage, Waterproofing and underground wall protection and are one of the largest manufacturers of Cavity drain membranes in the world.

Delta systems may be upgraded as part of a total system in order to protect structures from ground gases and the attached indicative drawings should be read in conjunction with Datasheet EN 07 2012 chemical resistance of DELTA HDPE membranes.

Double sealing of the Delta membrane system is not generally a requirement however guidance is taken from BS8102, with regard to soil gases and less than adequate workmanship/defects and is therefore optional.

The Delta system is considered as only part of a total remediation system and as such does not negate the need for full site and ground Gas evaluation, risk assessment or monitoring and control. Mechanical extraction of soil gases in addition may well be required.
