

# Delta Training Course Ground Gas Protection Systems

## COURSE DESCRIPTION

---

The installation of Ground Gas Protection is a highly skilled specialised activity and is becoming more of a requirement within the industry.

Our one-day training course provides good practice on risk assessment, a pragmatic approach to ground gas risk, review of legislation and latest standards, an insight into what ground gas protection systems are, best practice and guidance on gas protection measures.

Our focus is to provide a training course which delivers you and your teams value. Our training courses are designed to be relevant and cost effective whilst being delivered to a high standard.

## HOW WILL THIS BENEFIT ME?

---

Delta's training courses are a combination of knowledge and practical sessions that are designed to develop ability and most importantly practical confidence.

Delta's training fully functional training facilities sets a high benchmark for offering a unique "hands-on" training experience as if you were "on site".
