

## Delta Training Course Maxx Pump installation

### COURSE DESCRIPTION

Get hands-on sump pump installation, repair and maintenance training by attending our Maxx Pump Installation training course.

On this intensive 1 Day, instructor-led course you will examine the various aspects to basement drainage including: sump pump installation, servicing and maintenance along with commissioning.

This training course is ideal for both expert and novice technicians who want to strengthen their basement drainage knowledge and seeking the fundamentals of sump pump repair as well as experienced technicians seeking skills improvement or a refresher.

The course covers sump pump design, pump types, parts, common causes of pump failure, repair techniques and using predictive maintenance to reduce the risk of future failures.

### HOW WILL THIS BENEFIT ME?

The course will enable delegates to develop a deeper understanding of the function of ground and foul water

sump pumps and will help delegates to identify correct products and their uses – sump pumps, high level water alarms, battery backups.

Identify and understand the operation of different components within a basement drainage system, calculate number and size of pump station required for projects, understand the parameters that are required when designing a new basement drainage system. Installation of pump stations (mechanical & electrical) along with advanced MaxxConnect installation using intelligent alarm and monitoring systems.

### WHO CAN ATTEND THIS COURSE?

Anyone construction professional working within the environments of waterproofing design, planning, installation and commissioning of basement drainage systems. Waterproofing Technicians wishing refresh knowledge. Waterproofing professionals seeking to begin the path to becoming a Delta Registered Installer.

### LOCATIONS

Delta HQ, Epping  
North of England

### COURSE DURATION

8.30 am for a 9 am start – 4 pm with lunch and refreshments provided.

### COURSE INSTRUCTORS

Our Pump Partners Package Pump Systems will head the training course providing candidates with knowledge and expertise. Package Pump Systems “PPS” are specialist manufacturers of submersible packaged pump stations for the building services market. Typical applications include pumping foul, surface and ground water from domestic and commercial properties. PPS will be joined by members of Delta’s Technical Team. Installation Training will be held at our pump partners PPS Ltd premises.

### COURSE DATES

Held monthly.
