The AlertMaxx2 is an intelligent Wi-fi enabled high water level alarm, designed to detect high water levels within a pump chamber.

The alarm is normally powered by 240V, but has battery backup in case of a power failure. When used with a cavity drain system, the alarm carries out regular health checks on the pump system. It also provides an audible and visible warning if a pump fails. This ensures your basement remains protected from water ingress.

BENEFITS

- The AlertMaxx 2 can collect over 10 different parameters and variables using smart sensors and also utilises the data provided by the pumps themselves (when connected to a PumpSecure/PumpAware plan)
- Performs a regular health check on the packaged pump system, ensuring pumps automatically via a state of the art sensor built in to the device
- The ability for the home owner to see exactly how much energy their pump stations are consuming
- Simple installation procedure
- Lower maintenance costs, as service intervals can be extended where the collected data shows the system to be in good condition
- Monitoring power consumption and launch trimming actions to increase efficiency and reduce costs
- The data in the pump databases will allow manufacturers to understand the technology better, which, with ongoing research and development, will ensure constant improvements in products
- All-in-all a lower total cost of ownership for the customer
- The AlertMaxx 2 is compatible with the MaxxFamily products

ASSOCIATED PRODUCTS

- Delta Sump Pump Systems
- PowerMaxx
