

The team at Delta Membrane Systems were surprised and absolutely delighted to be recognised and named as the winner of the Innovation and Sustainability Award

# Delta wins ASUC Award for 'Innovation and Sustainability'

On Friday 24th November, David J. Symes and Paul Green of Delta Membrane Systems had the pleasure of attending the ASUC (Association of Specialist Underpinning Contractors) yearly AGM and awards ceremony held at Café de Paris, London.

Simon Haslam, ASUC Chairman, commenced the AGM and awards ceremony by welcoming all. John Patch gave the ASUC AGM update, followed by Simon updating members on another busy and full year.

Guest speaker Eddie 'The Eagle' Edwards thanked speaker sponsors and awards were given.

The last award of the ceremony was announced for Innovation and Sustainability, a category not usually associated with the Association of Specialist Underpinning Contractors, but it was felt that Delta Membrane Systems – a member of ASUC, which had taken part in the 'BRE Flood Resilient Home' project – should be recognised for its innovative work in flood remediation.

The team at Delta Membrane Systems were surprised and absolutely delighted to be recognised and named as the winner of the Innovation and Sustainability Award.

As a growing and niche business, to win the category of Innovation and Sustainability of the Year is a testament of the company's earnest effort, not only as a business but also as a great achievement to all involved in the flood remedial and waterproofing sectors.

This is the second award Delta Membrane Systems has won this year, having won the PCA (Property Care Association) Innovation and Sustainability Award back in May.

Delta Membrane Systems is also in the running for the prestigious Construction News Specialist Awards for the categories of 'Innovation of the year (Non-Contractor)' and 'Material Supply of the Year'.

Delta Membrane Systems has sought to improve the built environment through research and knowledge generation, to win this award is a great testament to its commitment and dedication.

Christopher Burbridge, Director for Delta Membrane Systems, said: "Receiving any kind of award is a great achievement; winning one from a great organisation such as the Association of Specialist Underpinning Contractors (ASUC) is an achievement we are incredibly proud of. Very few things in life are entirely the work of just one person and this is no exception, so I must pay tribute to the enormous contributions of all Delta staff, without which none of this would have been possible. This award is as much for #TeamDelta as it is for me and my fellow directors. The award will take pride in our training suite at our head office in Epping. With so many good projects to choose from, the judges must have had an unbelievably difficult job and I'd like to thank everyone who voted for Delta Membrane Systems to win."

David J. Symes, Technical Director for Delta Membrane Systems, added: "With such strong competition, I really do count myself and the Delta team lucky to win – but win we did. On a personal level, it was a great feeling to collect the award. Travelling home with the award in my hand was an incredibly uplifting experience. Every time I look at the award, I'm reminded of the moment of collecting it. The future looks bright! Well done #TeamDelta."

It was felt that Delta Membrane Systems should be recognised for its innovative work in flood remediation
